

Alaso Health — Brand Guidelines

Version 1.0 · © 2026 Alaso Health

Alaso is the product. Alaso Health is the company. This document defines how both are presented so every surface — app, store listing, website, print — feels like one brand.

1. Brand architecture

---	---
App name, UI, manifest, store listing title	Alaso
Developer, legal, copyright, marketing identity	Alaso Health
Attribution lockup	<i>Alaso — by Alaso Health</i>
Copyright line	© 2026 Alaso Health

Never write "Alaso Health app" for the product, and never credit the app to anything other than Alaso Health.

2. The mark

The Alaso symbol is a geometric "A" built from two rising paths over a horizon crossbar, crowned by a small sun disc — motion, mountains, and morning light. A subtle green horizon arc and a gold star accent complete the full-detail version. The cues are cultural (Haitian resilience, community, progress) but abstract: the mark must read as premium fitness software first.

Responsive-logo rule (mandatory):

- Below 64 px rendered size: use the **simplified mark** — A + red sun

only. No star, no horizon arc. (Favicons, tab bars, small chrome.)

- 64 px and above: the full-detail mark is permitted.

Clear space: keep empty space around the mark equal to the diameter of the sun disc on every side. **Minimum size:** 16 px (simplified), 64 px (full).

Misuse — never: stretch or skew, recolor the paths, place the full-detail mark at small sizes, add drop shadows, rotate, place on clashing photography, or combine with national flags or state emblems.

Files: `public/brand/` — `alaso-logo.svg` (lockup), `alaso-wordmark.svg`, `alaso-mark.svg` (transparent), light/dark/mono variants, PNG exports at 1x/2x.

3. Color

Two heritage trios anchor the palette — Haitian **blue · red · white** and Pan-African **red · green · black** — on grounds of white and light blue. Blue leads. Red punctuates. Green and ink carry the Pan-African accents. Gold is rare.

---	---	---
brand-700	<code>#142d73</code>	Primary brand blue — buttons, active states, chart series
brand-300	<code>#8ba7f0</code>	Primary on dark backgrounds
accent-500	<code>#c22743</code>	Restrained red — small accents, errors, destructive
gold-500	<code>#c2a04f</code>	Streaks and personal bests only
green-600	<code>#1d6f4a</code>	Pan-African green — heritage bands, horizon arc
ink	<code>#171817</code>	Pan-African black — heritage bands, wordmark
logo-white	<code>#ffffff</code>	Mark paths on brand field
surface-0	<code>#f5f8ff</code>	Light background (light Haitian blue)
elevated	<code>#ffffff</code>	Cards and sheets on the light ground
surface-950	<code>#111110</code>	Dark background (charcoal)

Rules: backgrounds are white and light blue — never warm cream. Red occupies no more than ~5% of any screen. Large brand-blue areas are reserved for the mark's field and primary buttons. Semantic tokens (`--bg` , `--fg` , `--primary` , ...) in `src/app/globals.css` are the only way UI code consumes color — never hardcode hex in components.

4. Typography

- **Typeface:** Geist (sans) with Geist Mono for tabular data contexts.
- **Numerals:** always `tabular-nums` for metrics.
- **Hierarchy:** one bold, tight-tracked headline per screen; 11–14 px muted

labels; type scale and whitespace create hierarchy before boxes or dividers.

5. Spacing

Base rhythm: 4 px grid. Cards use 16 px padding and 20 px radius; 10 px gaps within groups; 16 px between sections. Tap targets are never smaller than 44 × 44 px.

6. Light and dark mode

Both themes are first-class. Dark mode is not inverted light mode: surfaces step from `#111110` through `#191816` / `#23221f` , the primary shifts to brand-300, and borders lighten to 14–24% alpha ivory. Every component uses the semantic tokens so themes stay in lockstep. Test every screen in both themes before shipping.

7. Accessibility

- WCAG 2.2 AA contrast in both themes (verify muted text on sunken surfaces).
- 44 px minimum touch targets; visible keyboard focus (brand-500 ring).
- Nothing communicated by color alone; charts carry text summaries.
- All motion is 150–250 ms, meaningful, and disabled under reduced-motion.
- Layouts survive 320 px width and 200% zoom.

8. Brand voice

Calm, encouraging, honest. Numbers speak first; words explain.

---	---
"A little progress still counts."	"No excuses."
"Ready when you are."	"You failed."
"Every repetition counts."	"Crush / shred / burn"
"entered manually" (honest labels)	fake "synced" states
"Apple Health"	"HealthKit" (user-facing)

Weight and exercise relationships are described observationally, never causally, and never with medical claims.

9. UI examples

The canonical implementations live in the product:

- **Today dashboard** — arc step gauge with red leading-edge marker, metric

cards, quick-log grid.

- **Quick-log sheet** — bottom sheet, numeric stepper, +1/+5/+10 chips,

effort chips.

- **Progress** — blue data series, red reference lines, range chips.
- **Onboarding** — mark, wordmark, privacy-first message.

Screenshots of these screens (light and dark) ship in `public/store/screenshots/` and are the reference for any marketing use.

10. Ecosystem

Future Alaso Health products (Nutrition, Coach, Family, Challenges, Insights, Premium) inherit this system: same palette, same typography, same voice, same mark construction with product-specific accent treatments. See

`docs/ecosystem.md`.
